SMALL ARMS AMMUNITION IDENTIFICATION GUIDE by U.S. Army Foreign Science and Technology Center

This guide, an aid for use in identifying small arms ammunition up to and including 14.5 mm in caliber, enables persons unfamiliar with such ammunition to identify specifically both the caliber and the country of manufacture of any currently used round on the basis of size, shape, and markings. In addition, the guide explains the head stamping practices of 60 countries, lists the principal weapons chambered for each of 60 calibers, and includes a listing of the identifying markings in use by each country. Covers all military cartridges manufactured since 1930! Although many calibers and markings are obsolete in their parent countries, they are considered in this guide because of their continued use in other countries. The information contained herein is based upon foreign publications, intelligence reports, and the results of examinations and testings of specimens of foreign cartridges. 151 pp., 6½x4½, 79 illus.

AMBUSH AND COUNTER AMBUSH

Ambushing, which is perhaps the oldest tactic in this long history of war, has in recent times become the most widely used insurgent technique in Communist revolutionary warfare, because successful ambushes achieve results far out of proportion to the number of men deployed and permit the ambushers to melt away quickly before retaliatory action can be mounted. This book thoroughly covers an important subject. 80 pp., illustrated, $2.00
